Guarantee Certificate

for the Hydrotect surface coating

The Hydrotect surface coating is burned-in at high temperatures. It is as wear-resistant as the surface of the particular tile itself. This means: as long as the wear remains within the limits of the respective stress group, the photocatalytic properties are maintained **permanently** already at normal lighting by artificial light or sunlight. This guarantee covers all first-choice tiles produced by Deutsche Steinzeug and treated with the Hydrotect surface coating.
